Integration Services

# Integration Services

## Understanding the big picture

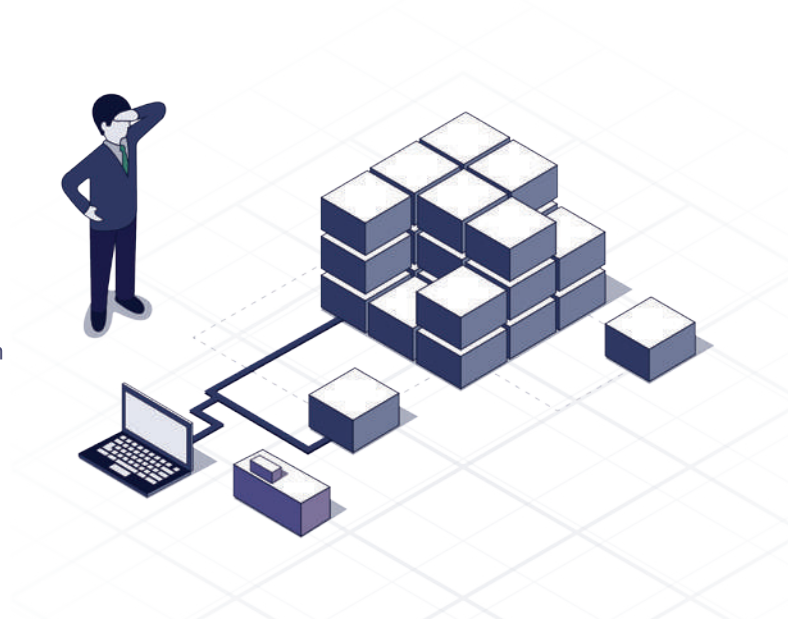

Organisations today are no longer isolated enterprises: they are distributed ecosystems of employees, customers, partners and suppliers; all with different processes and systems that require seamless and efficient integration. Do you have integration needs requiring high scalability, complete security and redundancy? Do you require guidance with off-the-shelf integration platforms or development of high performance custom platforms?

Integration technologies and approaches have evolved significantly in the last few years. We employ the latest technologies to empower our clients and foster collaboration between business and IT.

### Our services include:

- ✓ A holistic integration approach addressing technology, security and scalability
- ✓ Implementing our integration approach for gradual migration and evolution of your technology landscape

- ✓ Establishing an operational environment capable of simple scaling of resources, continued deployment of systems & end-points, and detailed logging and analysis
- ✓ Deeply rooted experience in exposing SAP data
- ✓ Deployment of API-led re-composable business processes

Our integration consultants are specialists, with over 20 years extensive experience in various integration technologies.
