Internet of Things (IoT)

# Internet of Things (IoT)

Connecting a complex world

The Internet of Things refers to a suite of technologies that allow devices to interconnect and provide information about their state and the entities they monitor.

Do you need solutions that holistically address your IoT needs, including bespoke electronics development and manufacturing, bespoke software & electronics and data sciences?

**By utilising the latest software engineering best practices, we provide innovative services and deliver:**

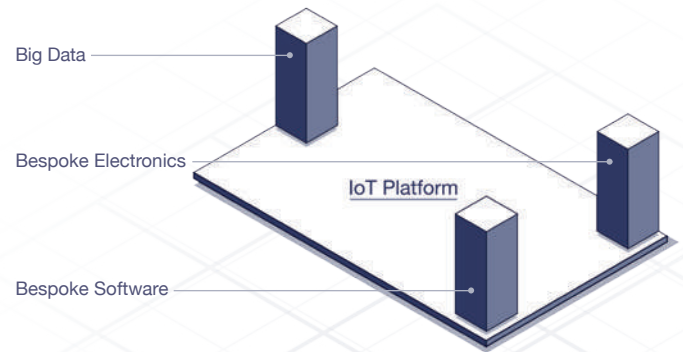

- ✓ A Highly scalable IoT Platform
- ✓ Device technology independence
- ✓ Open standard support
- ✓ Application Programming Interfaces (APIs) for integrators
- ✓ Enterprise-grade security to protect sensitive data

Through our continual involvement with research teams at the CSIR and universities, we stay up to date with the latest developments such as blockchain and long-range radio (LoRa) technologies.

**Example projects include:**

- ✓ Intelligent electricity metering
- ✓ GPS enabled vehicle access control
- ✓ Drop-safe monitoring
- ✓ Remote biometric solution
- ✓ Limited payout machine
- ✓ Cash-in-transit solution

Let us assist you to unlock the potential of the Internet of Things and create real economic value for your business.

We help you digitize the physical world.
